MODULAR #DONERIGHT

Innovative modular company, Done Group, announces first QSR project

EUNICE, LA – FEBRUARY 21, 2018 – Done Group is pleased to announce the production of its first quick service restaurant (QSR) in Eunice, LA.

The team recently opened a manufacturing plant in Knoxville, TN and has since been producing modules for the QSR industry. Working with general contractor Burns & McDonnell, Done Group has prefabricated the modules offsite and will be transporting them from Knoxville to Eunice at the end of February. Each quick service restaurant will be made of four modules that will travel in sequential order for installation. This process will add time-saving value upon delivery to site and will allow subsequent trades to be on site quicker than with a traditional stick-built QSR. The modules include full floor and wall finishes, MEP connections, plumbing fixtures, HVAC ducting and they have all been built in compliance with current IBC fire codes.

The client approached Done Group with a request to modernize the standard QSR building process. “We are proud to introduce and showcase our innovation to the quick service restaurant market,” says General Manager Darren Barnes. “Lochsa Engineering, Fastwalls, Martyn Consulting and Vulcraft are all leaders in their respective industries and we are proud to have worked with them to create an exceptional product for this project.” The team has dedicated significant resources to research and development for quick service restaurants and has worked closely with the client to ensure design needs were met and to provide solutions.

The quick service restaurant in Eunice, LA is scheduled to be fully complete in April 2018.

About Done Group

Done Group is passionate about the construction industry and continuously explore ways to improve and innovate conventional methods. The team has built using traditional methods and prefabrication over the last 30 years which has allowed them to realize the best way to build. Done Group focuses on custom whole room modular construction that does not compromise design or creativity. The modules are manufactured locally, and Done Group collaborates with qualified engineers, architects, manufacturers and qualified sub-trades to provide superior products and services to clients across North America.
